Candidate replacements

Filtered to players who play Right Winger (primary or secondary position per Transfermarkt) with ≥1500 minutes played this season, age ≤24, ranked by statistical similarity to the target (0–1, higher = more similar). Club and market value are the candidate's current details per Transfermarkt, which may differ from the club the season's stats were recorded at. The list is deliberately longer than a final shortlist — candidates who realistically won't move can be struck out without leaving it short.

Statistical comparison

Extended comparison & watch-outs

Second-tier stats the similarity ranking doesn't use, plus ball-security and discipline indicators. Cells are shaded relative to the target: green = better, red = worse, deeper shade = bigger gap (measured against the spread of this shortlist). Shading is direction-aware — for failed dribbles, duels lost, fouls committed and cards, lower is better, so green still always means the candidate beats the target. API-Football records no direct possession-lost stat; failed dribbles, duels lost and fouls committed are the closest honest proxies for a player who gives the ball away. A dash means the stat isn't available from this run's data source.
